JAC ELAN

The Surface Company

—
Infinity | The engineered surface is the new surface realized in big slabs for worktops, furnishing and projects.

—
Infinity | The engineered surface è la nuova superficie in grande lastra per piani di lavoro, arredo e progetti.

NEW-GENERATION PRODUCTS AND SERVICES

Infinity derives from decades of experience accumulated by Concorde Group, the largest Italian manufacturer of ceramic floor and wall coverings for architecture and interior design.

We design, produce and sell large-size slabs for furnishing accessories, for application on interior walls or for cladding of glazed or ventilated walls.

Our slabs are manufactured in sizes of up to 1620×3240 mm, and are conceived for thicknesses of 6, 12 and 20 mm, for all kinds of requirements.

PRODOTTO E SERVIZIO DI NUOVA GENERAZIONE

Infinity nasce dall'esperienza pluridecennale del Gruppo Concorde, il maggior produttore italiano di pavimenti e rivestimenti in ceramica per l'architettura e l'interior design.

Progettiamo, realizziamo e vendiamo lastre in grande formato per la realizzazione di complementi d'arredo, per l'applicazione a rivestimento di interni o per rivestimenti esterni in facciata incollata o ventilata.

Le nostre lastre raggiungono una dimensione massima di 1620×3240 mm e sono pensate negli spessori da 6, 12 e 20 mm per ogni tipo di esigenza.

Our Technology

NaturaVein Tech is the revolutionary innovation developed by Infinity technical experts to obtain body-veined slabs, recreating the effect found on natural marble.

During the production process, this technology allows a controlled sedimentation of the minerals, passing through the full thickness of the slab for perfect consistency between the surface and the body.

Exactly like natural marble, the veining pattern is completely random. The technology can be applied to both the 20 and the 12 mm thicknesses.

NaturaVein Tech is the latest step forward in porcelain stoneware production technology, a new frontier that edges the industrial product even closer to the unique, natural look of marble.

NaturaVein Tech è la rivoluzionaria innovazione sviluppata dai tecnici Infinity per ottenere lastre a vena passante ricreando lo stesso effetto del marmo naturale.

Questa tecnologia consente di ottenere durante il processo produttivo una sedimentazione dei minerali in modo controllato, attraversando l'intero spessore della lastra e ottenendo una perfetta coerenza tra superficie e impasto.

Esattamente come il marmo naturale il disegno delle venature è completamente random. La tecnologia può essere applicata sia allo spessore 20 mm, che al 12 mm.

NaturaVein Tech rappresenta l'evoluzione ultima della tecnologia produttiva del gres porcellanato, una nuova frontiera che avvicina ulteriormente il prodotto industriale alla naturalezza e all'unicità del materiale naturale.

Why Infinity?

ADVANTAGES OF THE PRODUCT

All Infinity products have structural, aesthetic and functional characteristics that make them a unique option for furnishings, indoor and outdoor floor and wall coverings.

The slabs are resistant to wear, tear, scratches and are easy to clean. As the years pass, they do not show the unattractive signs of wear typical of resins or other natural materials, and are not affected by heat or acids.

VANTAGGI DEL PRODOTTO

Tutti i prodotti Infinity hanno caratteristiche strutturali, estetiche e funzionali che li rendono unici per la realizzazione di arredo, rivestimenti e pavimenti per interni ed esterni.

Le lastre sono resistenti all'usura, antigraffio e facili da pulire. Non manifestano nel tempo effetti antiestetici di usura tipici delle resine o di altri materiali naturali e sono inalterabili al calore e agli acidi.

Infinity offers a limited conventional guarantee.

Sizes and Surfaces

Quality raw materials
Materie prime di qualità

No alteration in colour
Nessuna alterazione cromatica

Versatile for any project
Versatile per qualsiasi progetto

Resistant to heavy loads
Resistente a carichi elevati

Non-absorbent
Inassorbente

Easy to clean
Facile da pulire

Resistant to liquids and acids
Resistente ai liquidi e agli acidi

Resistant to scratches and abrasions
Resistente a graffi e alle abrasioni

Resistant to thermal shock
Resistente agli shock termici

Resistant to frost
Resistente al gelo

Non-toxic slabs that do not
release micro-particles
Lastre atossiche e senza
rilascio di microparticelle

Surface suitable for contact
with foodstuffs
Superficie idonea al contatto
con alimenti

Hygienic surface
Superficie igienica

SATIN

The Satin-finish surface is extremely soft to the touch, which makes it an excellent choice for kitchen tops, with an extremely realistic appearance and easy to clean. This particular finish is obtained with an exclusive production process developed by Infinity, characterised by sporadic, microscopic, almost imperceptible irregularities on the surface, visible only in particular light conditions. These specific characteristics can in some cases create an even more realistic effect, without affecting the properties and matchless technical performance of the surface.

The Satin finish is perfect blend of beauty and functionality. It is perfectly smooth, soft to touch, with a balanced, homogenous level of opacity that creates an interesting contrast with graphics of the slabs. The total absence of any texture makes daily cleaning and maintenance exceptionally easy.

SATINATA

La superficie Satinata si contraddistingue per la sua estrema morbidezza al tatto, peculiarità che la identifica come la scelta migliore per la realizzazione di top cucina, facili da pulire e dal grande realismo estetico. Questa particolare finitura è ottenuta attraverso un processo produttivo esclusivo sviluppato da Infinity; si caratterizza per sporadiche e microscopiche irregolarità superficiali, quasi impercettibili, se non in particolari condizioni luminose. Questa specificità, in alcuni casi, va addirittura ad aumentare il realismo del prodotto, senza mai inficiarne le proprietà e le insuperabili performance tecniche.

La finitura Satinata rappresenta la perfetta sintesi tra estetica e funzionalità. La superficie si presenta perfettamente liscia, morbida al tatto, con un grado di opacità controllato e omogeneo capace di esaltare lo sviluppo grafico delle lastre. La totale assenza di struttura massimizza la pulibilità e la manutenzione quotidiana.
